AB The invention provides cytokine fusion proteins, with an increased therapeutic index and methods to increase the therapeutic index of such fusion proteins. The fusion proteins of the invention are able to bind to more than one type of cytokine receptor expressed on cells and also bind to more than one cell type. In addition, the fusion proteins of the invention exhibit a longer circulating half-life in a patient's body than the corresponding naturally occurring cytokine. The immunocytokine is mutant interleukin 2 fused to an albumin or antibody domain.

AB Specific binding members, based on the third CDR of the heavy and light chain variable regions of antibody NHS76 are provided. Antibody NHS76 is an IgG specific for human nuclear antigen, and is prep. by screening phage antibody library-derived scFv that binds to nuclear ext. of human Raji cells. These binding members are useful for treatment and diagnosis of tumor in human or animal body.
